DEPARTMENT OF BIOCHEMISTRY

VISION OF THE DEPARTMENT

- To be recognized in the global scientific arena, with a marked specialization and excellence in Biochemistry.
- To provide an atmosphere for critical thinking to differentiate and interlink the various branches; cell biology, intermediary metabolism, clinical biochemistry, immunology, enzymology and endocrinology.

MISSION OF THE DEPARTMENT

M1	To excel in the basic concepts and principles of Biochemistry
M2	To identify the problem in protocols in the thrust areas of research where the intervention of biochemist is essential
M3	To expose the students to the grooming areas of research with advanced instrumentation technique
M4	To correlate the anthropogenic inputs in the environment with the biochemical changes in the biological species and its impact on human life
M5	To understand the concepts in scientific learning for the process of experimentation and hypothesis testing.

PROGRAMME EDUCATIONAL OUTCOMES (PEO)

PEO1	Compare and contrast the scope and profundity of scientific knowledge in the broad range of fields, including Cell biology, Intermediary metabolism, Clinical Biochemistry, Hormonal Biochemistry, Genetics, Nutritional Biochemistry, Immunology and Enzymology.
PEO2	An ability to gain knowledge and know-how for successful career in academia, industry and research.
PEO3	Describe the biochemical basis of human diseases, protein structure and conformation, non invasive diagnostics, biochemical pathway regulation and drug development and apply the same for a multitude of laboratory applications.
PEO4	Promoting lifelong learning to meet the ever-evolving professional demands by developing ethical, inter personal and team skills.

PROGRAMME OUTCOMES (PO)

PO1	Life Sciences knowledge: Successful candidates will acquire current/recent specific knowledge in the respective discipline with proficiency in practical skills and leadership skills for a successful career.
PO2	Problem analysis: Successful candidates will be able to analyses, design standards, resolve and troubleshoot problems in implementation or standardization of Life sciences protocols.
PO3	Design/development of solutions: Successful candidates will develop creative and cognitive thinking and cooperate with each other to solve problems in the field of Life sciences.

PROGRAMME SPECIFIC OUTCOMES (PSO)

PSO1	Demonstrate an understanding of structure and metabolism of macromolecules and understand the regulation and disorders of metabolic pathways.
PSO2	Gain proficiency in laboratory techniques in both biochemistry and molecular biology, and be able to apply the scientific method to the processes of experimentation and Hypothesis testing.

BOARD OF STUDIES

List of Members

Department of Biochemistry

S. No	Name & Designation	Address	Role
1.	Dr. R. B.Usharani	Associate Professor & Head i/c, Department of Biochemistry, School of Life Sciences, VISTAS	Chair Person
2.	Dr. P. Kalaiselvi	Department of Medical Biochemistry, University of Madras	External Expert
3.	Dr.M.Ganesan	Managing Director, Microtherapeutics Research Labs No 6, Kamarajar St, East Tambaram, Selaiyur, Chennai 600059	External Expert
4.	Dr.R.Padmini	Associate Professor, Department of Biochemistry, School of Life Sciences, VISTAS	Member
5.	Dr.C.Shobana	Associate Professor, Department of Biochemistry, School of Life Sciences, VISTAS	Member
6.	Dr.R.Vidya	Assistant Professor, Department of Biochemistry, School of Life Sciences, VISTAS	Member
7.	Dr.P.Amudha	Assistant Professor, Department of Biochemistry, School of Life Sciences, VISTAS	Member
8.	Ms. Sathya	Medical coder, Omega Health Care, Chennai	Alumni member 2014-2016 batch

RESEARCH PROJECT

Category	Code	Course	L	T	P	O	C
RP1	24RMBC41	RESEARCH PROJECT I	0	0	12	10	12

SEMESTER I

KNOWLEDGE IS POWER

L	T	P	O	C
4	0	0	2	4

COURSE OBJECTIVE:

The objective is to study about the structure and biological functions of macromolecules such as proteins, polysaccharides, lipids, and nucleic acids, as well as small molecules such as primary metabolites, secondary metabolites, and natural products.

UNIT- I CARBOHYDRATES**12**

Carbohydrates: Classification of Carbohydrates. Structure and functions of Monosaccharides, Disaccharides and Polysaccharides. Structure and biological importance of sugar derivatives, Glycosaminoglycan's, Proteoglycans, Glycoproteins and Lipopolysaccharides.

UNIT-II PROTEINS**12**

Classification, structure and properties of amino acids and proteins. Structural organization of proteins(1^o structure, 2^o Structures, 3^o Structures and Quaternary Structure). Peptide Synthesis. Isolation and purification of proteins. Conformational study on the structure of keratin, collagen and hemoglobin .

UNIT-III LIPIDS**12**

Lipids- Classification, structure and functions of fatty acids, alcohols and lipids. Physical and chemical properties of fatty acids. Structure and function of Eicosanoids, Lipoproteins-classes, transport and functions. Steroids.

UNIT –IV NUCLEIC ACIDS**12**

Structure of Nucleic acids (DNA & RNA) . A, B and Z forms of DNA. DNA super coiling and linking number. Properties of DNA – buoyant density, viscosity, hypochromicity, denaturation, renaturation, Cot curve. Chemical synthesis of Nucleic acids. Chemical and enzymatic methods of Nucleic acids sequencing. Major classes of RNA, their structure and biological role. Types of RNA, Si RNA, Micro RNA

UNIT- V VITAMINS**12**

Vitamins- Definition and classification. Source, Structure and biological role, daily requirement and deficiency manifestation of the fat soluble vitamins A,D,E & K. Water soluble vitamins-Ascorbic acid, thiamine, riboflavin, pyridoxine, niacin, pantothenic acid, lipoicacid, biotin, folic acid and vitamin B12.

Total: 60 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Understand the properties of carbohydrates, proteins, lipids, cholesterol, DNA, RNA, glycoproteins and glycolipids and their importance in biological systems
- CO 2:** Describe the chemistry of carbohydrates, lipids, amino acids and proteins and nucleic acids
- CO 3:** Explain organization and working principles of various components present in living cell.
- CO 4:** Interpret molecular structure and interactions present in proteins, nucleic acids, carbohydrates and lipids
- CO 5:** Develop skills to determine amino acid and nucleotide structures using the sequences of proteins and DNA respectively

Text Books:

1. J.L.Jain et al. (1994), S.Chand and Company, 4th edition, Fundamentals of Biochemistry.
2. M.N.Chatterjea and Ranashinde (2005), Text book of Medical biochemistry, 6th edition, Jaypee Brothers Medical Publisher (P) Ltd.

Reference Books:

1. Champe and Harvey (2007), Lippincott's illustrated biochemistry, 6th edition.
2. D.Voet and J.G. Voet (2004), Biochemistry, John Wiley & Sons, USA.

L	T	P	O	C
4	0	0	2	4

COURSE OBJECTIVE:

Advanced instrumental techniques are used to understand the theoretical principles involved in Bioinstrumentation which may be used for the determination of nutrients, major ions and trace elements, biological samples together with the analytical techniques.

UNIT- I MICROSCOPY AND CYTO TECHNIQUES 12

Microscopy - Principles of Microscopy – bright and dark field, fluorescence, phase contrast, scanning and transmission electron microscopy. Cytotechniques – tissue homogenization and Cell disruption, cell counting and sorting, cell culture techniques, preservation of cell and tissues.

UNIT-II RADIOACTIVITY AND BIOSENSORS 12

Radioactivity- introduction, types, Detection and measurements - GM counter, Scintillation counter. Safety aspects. Biological applications: assessing the metabolic pathways, radio dating, isotope dilution technique, and autoradiography. Biosensors - Introduction to Biosensors: Concepts and applications. Biosensors for diabetes management. Noninvasive Biosensors in Clinical Analysis.

UNIT-III CENTRIFUGATION AND ELECTROPHORESIS 12

Centrifugation: Basic Principles of Centrifugation. Instrumentation and applications of Preparative - Differential and Density Gradient Centrifugation, Analytical Ultracentrifugation – ultra centrifuge, applications. Electrophoresis: Principles and Factors Affecting Electrophoresis. Principle, methodology and applications of PAGE, SDS-PAGE, IEF, 2D PAGE, Agarose Gel Electrophoresis, PFGE.

UNIT – IV CHROMATOGRAPHY 12

Chromatography: Principles, Instrumentation and Applications of Paper Chromatography, TLC, Column Chromatography, LPLC, HPLC, Gel filtration Chromatography, Ion-Exchange Chromatography, Affinity Chromatography and GLC.

UNIT- V SPECTROSCOPY 12

Spectroscopy: Basic Principles of Electromagnetic Radiation, Beer-Lambert's Law. Principle, instrumentation, operation and applications of UV-Visible, IR, Spectrofluorimetry,

Flame Photometry, AAS, NMR, ESR, X-Ray Diffraction, Mass spectrometry. To Visit an industry with advanced instruments pertaining to the techniques for demonstration.

Total: 60 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Evaluate the applicability, advantages, limitations and sources of error of current analytical instruments through an understanding of the working principles of these instruments and the underlying biochemical basis
- CO 2:** Conduct biochemical analyses and instrument evaluations in the laboratory and link the practical applications to the theoretical background
- CO 3:** Interpret and critically evaluate analytical data and communicate the results of biochemical analyses in the form of formal scientific reports
- CO 4:** Work collaboratively in a team environment to discuss and solve mathematically-based biochemical problems
- CO 5:** Understanding the principles of Electrophoresis, Spectrophotometry and their applications in biological investigations/experiments.

Text Books:

1. Keith Wilson and John Walker (2010), Principles and techniques of Practical Biochemistry, Seventh edition, Cambridge University Press.
2. Asokan P (2009), Analytical Biochemistry, Chinna publication.

Reference Books:

1. Chatwal, G & Anand, S (2005), Instrumental methods of chemical analysis, Himalaya Publishing House.
2. S. K. Sawhney & Randhir Singh (2014), Introductory Practical Biochemistry, Narosa Publications House.

Web Sources:

2. https://www.chem.uwec.edu/chem406_f06/pages/lectnotes.html

L	T	P	O	C
4	0	0	2	4

COURSE OBJECTIVE:

The objectives of the course are to learn and understand the fundamentals of cell biology like cell organelles, cytoskeleton, cellular transport, cell-extracellular matrix interaction, cell division, and protein trafficking and signal transduction etc.

UNIT- I PLASMA MEMBRANE**12**

Biochemical composition, Membrane proteins glycophorin, bacteriorhodopsin, membrane bound enzymes-cell surface antigens, Molecular organization, freeze fracture technique and fluid mosaic model, lipid and protein fluidity and molecular mobility of proteins. Isolation and characterization of plasma model membranes, reconstitution of proteins into vesicles, liposomes.

UNIT-II MITOCHONDRIA**12**

Structure of mitochondria, aerobic respiration, respiratory chain carriers, respiratory enzyme complexes and redox potential, inhibitors of respiratory chain, uncouplers. Thermodynamic principles, Energy rich bonds, coupled reactions and oxidative phosphorylations, Bioenergetics. Chemiosmotic hypothesis- loop mechanism, respiratory control, inhibitors of oxidative phosphorylation.

UNIT-III MEMBRANE TRANSPORT**12**

Simple diffusion, Donnan equilibrium, diffusion of charged and uncharged particles, Flick's law, Nernst law. Facilitated transport: carriers and channels. Active transport: Na pump models mechanisms, Ca pump, ATP dependent proton pump. Co-transport: Symport and Antiport; sodium dependent glucose transport amino acids and calcium.

UNIT – IV MICROTUBULES**12**

Structure, function and assembly, Colchicine interaction - formation of centrioles, mitotic spindle and cytokinesis. Golgi apparatus – Structure and functions. Ribosomes - Assembly of ribosomal sub units. Lysosomes - formation and function, phagocytosis. Nucleolus - Structure and composition, Chromosome - Chromatin structure and function. Nucleosome - histone and non-histone proteins.

Vesicular traffic in the secretory and endocytic pathways-Transport from a) the ER through Golgi apparatus b) Trans Golgi Network to Lysosomes. Mannose 6-Phosphate receptor shuttles. Transport in excitable cells - Internalization of macromolecules by phagocytosis, endocytosis and exocytosis. Pinocytosis: Receptor mediated endocytosis- delivery of iron by transferrin and infection. The molecular mechanisms of vesicular transport and maintenance of compartmental diversity.

Total: 60 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Describe the structure, functions and the mechanism of action of enzymes. Learning kinetics of enzyme catalysed reactions and enzyme inhibitions and regulatory process. Ability to perform immobilization of enzymes. Exposure of wide applications of enzymes and future potential.
- CO 2:** Demonstrate the fundamental energetics of biochemical processes, chemical logic of metabolic pathways. Knowing in detail about concepts to illustrate how enzymes and redox carriers and the oxidative phosphorylation machinery occur
- CO 3:** Understand the utilization of proton gradient to drive the formation of high energy bonds and high energy compounds
- CO 4:** Describe the detailed structures of eukaryotic and prokaryotic cells and methods used to examine them.
- CO 5:** Acquiring knowledge on cell-cell interactions, Cell cycle cell division and apoptosis

Text Books:

1. Donald Voet and Judith Voet (2004), Biochemistry, third edition, John Wiley & Sons, USA.
2. Geoffrey M. Cooper and Robert E Hausmann (2007), The cell and molecular approach, third edition, ASM Press, Sinauer Associates Inc, Washington, DC.

24PMBC11 PRACTICAL BIOCHEMISTRY AND INSTRUMENTATION

L	T	P	O	C
0	0	4	1	2

COURSE OBJECTIVE:

The course aims to develop skills of performing basic biochemical tests important in clinical investigations, to develop familiarity with biochemical laboratory techniques, and to introduce students to various practical aspects of enzymology and their correlation in disease conditions.

LIST OF EXPERIMENTS

Biochemical Studies

1. Estimation of Tryptophan
2. Estimation of Lactate
3. Estimation of pyruvate
4. Estimation of protein by Bradford's method
5. Isolation and estimation of DNA,
6. Isolation and estimation of RNA
7. Isolation and estimation of glycogen from tissues.

Instrumentation Lab

8. Separation of Amino acids/ sugars by paper chromatography and TLC
9. Separation of Plant pigments by column chromatography
10. Separation of Proteins by gel filtration chromatography
11. SDS PAGE-Demonstration

Total: 30 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Develop an understanding about the standardization of various biomolecules
- CO 2:** Examine the various techniques adopted for separation of biomolecules
- CO 3:** Examine the separation of biomolecules by electrophoresis
- CO 4:** Compare and discuss the instrumentation and applications of different chromatographic techniques

CO 5: Develop an understanding about the fundamental and applications of the instruments that are routinely used for the characterization of biomolecules

Text Books:

1. J. Jayaraman (2011) (Paperback), Laboratory Manual in Biochemistry, New Age International Pvt Ltd Publishers.
2. S. Sadasivam, A. Manickam (2009) (paperback), Biochemical Methods, New age publishers.

Reference Books:

1. Harold Varley (2006), Practical Clinical Biochemistry, 6 edition, CBS.
2. Hans Bisswanger (2011), Practical Enzymology, 2nd edition, Wiley VCH.

L	T	P	O	C
4	0	0	2	4

COURSE OBJECTIVE:

The content of the syllabus consists of basic biotechnology and its application such as new tools, products developed by biotechnologists such as cell culture, transgenic animals, Genetic engineering are useful in research, agriculture, industry and the clinic. It also helps to understand the Basic principles involved in Intellectual properties rights, scope and importance of marketing and its systems.

UNIT 1 VECTORS**12**

Restriction enzymes and joining DNA molecules by DNA ligase, double linkers, adaptors, homopolymer tailing. Plasmids vectors (pBR322, pUC 18), phage vectors (M13), cosmids, expression vectors, yeast vectors –YAC. Selection and screening of recombinants by genetic methods, immunochemical methods, nucleic acid hybridization methods. Synthesis of probes by radioactive and non-radioactive labeling. Analyzing DNA sequences by Maxam and Gilbert method and Sanger's methods.

UNIT 2 GENE TRANSFER METHODS**12**

Introduction of Foreign Genes into Cells using direct gene transfer methods - electroporation, biolistic transfer, transfection, microinjection, lipofection and ultrasonication. Genomic DNA libraries, chromosome walking, cDNA cloning, PCR, RAPD and RFLP.

UNIT 3 CELL CULTURE**12**

Cell and organ culture, primary cell culture, cell media and its types, transfer of genes into animal cells in culture. Viral vectors: SV40, retrovirus and adenovirus. In vitro fertilization and embryo transfer. Selectable markers and reporter transgenes. Gene therapy and Antisense therapy.

UNIT 4 TRANSGENIC ANIMALS**12**

Production of medically important biomolecules - insulin, growth hormone, interferons, blood proteins, vaccines, lymphokines and monoclonal antibodies. Production of transgenic animals – transgenics and knock-outs. Production of transgenic sheep, cattle, pigs, fish etc. Development and applications of transgenic animals.

Intellectual Property Rights (IPR) and Protection, Intellectual Property rights for Plant Breeding, Biosafety in biotechnology and Bioethics. Biotechnology Entrepreneurship.

Total: 60 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Explain the general principles of generating transgenic plants, animals and microbes. Identify and debate the ethical, legal, professional, and social issues in the field of biotechnology and design and deliver useful modern biotechnology products to the Society.
- CO 2:** Understand the role of vectors, plasmids in gene technology. Understand the gene transfer methods
- CO 3:** Understand the DNA sequencing methods. Identify different types of Intellectual Properties (IPs), the right of ownership, scope of protection as well as the ways to create and to extract value from IP. Identify, apply and assess issues relating to each of the relevant areas of intellectual property in various fields of scientific research.
- CO 4:** Recognize the crucial role of IP in organizations of different industrial sectors for the purposes of product and technology development. Understand the potential role of ownership rights and marketing protection in encouraging, or discouraging, scientific research
- CO 5:** Be familiar with the processes of Intellectual Property Management (IPM) and various Approaches for IPM and conducting IP and IPM auditing and explain how IP can be managed as a strategic resource and suggest IPM strategy.

Text Books:

1. Sathyanarayana (2006), Biotechnology, 3rd edition, Books and allied Publishers.
2. RC Dubey (2009), Text book of Biotechnology, S. Chand & Co.

Reference Books:

1. Brown TA (1995), "Gene cloning: An introduction" Nelson Thornes, 3rd edition.
2. S Purohit (2007), Biotechnology Fundamentals and applications, 4th edition, Agrobios Publication.

2. <https://www.easybiologyclass.com/topic-biotechnology/>

L	T	P	O	C
4	0	0	2	4

COURSE OBJECTIVE:

To make students to understand the basics of Nano, nanoparticles, nanomaterials, various methods of synthesis of nanoparticles, applications of nanoparticles, Synthesis and characterization of new nanoparticles.

UNIT 1 INTRODUCTION**12**

Background to Nanotechnology: Scientific revolution- Atomic structures-Molecular and atomic size-Bohr radius – Emergence of Nanotechnology – Challenges in Nanotechnology - Carbon age–New form of carbon (from Graphene sheet to CNT).

UNIT 2 NANOSTRUCTURES AND NANOMATERIALS**12**

Definition of a Nano system - Types of Nanocrystals-One Dimensional (1D)-Two Dimensional (2D) -Three Dimensional (3D) nanostructured materials. Carbon Nanotubes (CNT) - Metals (Au, Ag) - Metal oxides (TiO₂, CeO₂, ZnO), Biological system - DNA and RNA - Lipids – Size dependent properties - Mechanical, Physical and Chemical properties.

UNIT 3 SYNTHESIS OF NANOMATERIALS**12**

Synthesis of bulk nanostructured materials - Sol Gel processing- Mechanical alloying and milling-inert gas condensation technique-bulk and nano composite materials - Grinding - high energy ball milling-types of balls-WC and ZrO₂-materials –ball ratio-limitations- melt quenching and annealing

UNIT 4 CHARACTERIZATION OF NANOMATERIALS**12**

Characterization: Spectroscopic techniques - Infra red spectroscopy (IR)- UV-visible-Absorption, Imaging techniques - Diffraction analysis – XRD, Imaging techniques – Scanning Electron Microscope, Transmission Electron Microscope.

UNIT 5 NANOMEDICINE**12**

Nanotechnology for drug discovery - protein and peptide based compounds for cancer and diabetes - drug delivery - nanoparticle based drug delivery - lipid nanoparticles - vaccination - cell therapy -Gene therapy.

Total: 60 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Acquire knowledge about basics of nano scale, nano particles and nanomaterials
- CO 2:** Gain expertise in designing experiments and research hypothesis.
- CO 3:** Understand the principle and industrial application of nanoparticle
- CO 4:** Understand the mechanism for synthesis of nanoparticles.
- CO 5:** Know the principle and operating systems of bio analytical instruments

Text Books:

L	T	P	O	C
4	0	0	2	4

COURSE OBJECTIVE:

The objective is to impart knowledge and understanding of the human body. To enable the students to learn or to know the biological, physiological activities along with the mechanism of action of various organs.

UNIT 1 CIRCULATORY SYSTEM AND MUSCLES**12**

Definition and scope of anatomy, physiology. Anatomical terms in relation to parts of the body, system and organs. **Blood:** Composition and function. Types and function of blood cells. Haematopoiesis. Blood grouping- ABO, Rhesus system and Bombay blood group system. Blood coagulation. Structure and function – Spleen and lymphatic System. Circulatory system and Heart - Structure and functions of heart and associated blood vessels, Cardiac cycle. Blood Clotting. Hormones involved in the regulation of circulatory system. **Tissues:** Types of tissues and their functions. Muscles -Types of muscle cells and their functions. Mechanism of muscle contraction. Hormones involved in the regulation of respiratory system

UNIT 2 DIGESTIVE AND RESPIRATORY SYSTEM**12**

Digestive System: Structure and functions of alimentary canal - mouth, oesophagus, stomach, small intestine, large intestine – Digestion and absorption of food in the mouth, stomach and intestines. Various movements of digestive system. Salivary gland, Pancreas and Liver – structure and function. Defecation. Hormones involved in the regulation of digestive system. **Respiratory System:** Outline of various components of respiratory system. Mechanism and chemistry of respiration - considerations, transport of gases, exchange of gases. Bohr effect and role of 2,4 DPG.

UNIT 3 EXCRETORY SYSTEM**12**

Structure and role of kidney, nephrons, ureter, urinary bladder and urethra. Mechanism of urine formation- Glomerular filtration, GFR, tubular secretion and reabsorption. Regulation of water balance, electrolyte balance, acid-base balance. Hormones involved in the regulation of excretory system.

UNIT 4 NERVOUS SYSTEM

12

Brief outline of nervous system- types of nerve cells and nerve fibers, brain, spinal cord. Communication: Electrical and chemical communications - Transmission of nerve impulse, action potential, neurotransmitters and synapses, Membrane channels/carriers. Sleeping: Circadian rhythm, SEM and REM. Reward circuit of brain. Sense organs – Vision, hearing and tactile response. Hormones involved in the regulation of Nervous system.

UNIT 5 REPRODUCTIVE SYSTEM

12

Structure and functions of male and female reproductive system: Ovulation, menstrual cycle. Spermatogenesis and factors influencing sperm count and viability. Biochemistry of fertilization. Physiological changes during pregnancy, parturition and lactation.

Total: 60 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Discuss in-depth the structure and physiology of major human organs and explain their role in the maintenance of healthy individuals.
- CO 2:** Discuss in detail how the activities of organs are regulated for maximum efficiency.
- CO 3:** Explain in depth the interplay between different organ systems and how organs and cells interact to maintain biological equilibrium in the face of a variable changing environment.
- CO 4:** Identify how changes in normal physiology lead to disease.
- CO 5:** Implement the knowledge of human physiology in clinical biochemistry to predict and understand the disease.

L	T	P	O	C
4	0	0	2	4

COURSE OBJECTIVE:

This paper aims to provide thorough information on the basic properties of stem cells and the regulation at molecular level. It also describes the application of stem cell technology in the therapy of different diseases.

UNIT 1 STEM CELLS**12**

Definition, characterization, pluripotency, niche specification – Drosophila germ line stem cells, self-renewal and differentiation. Adult versus embryonic stem cells, post genomic adult stem cells, stemness, characteristics, hierarchy, stem cell niche. Adult stem cell from amniotic fluid, cord blood. Isolation and maintenance of murine stem cells, primate embryonic stem cells, and human embryonic stem cells.

UNIT 2 EMBRYONIC STEM CELLS**12**

Principle of cell passage, colony formation, techniques for derivation of embryonic stem cells, differentiation and transdifferentiation. Derivation and maintenance of human embryonic stem cells, derivation and differentiation of human embryonic germ cells, isolation and maintenance of avian embryonic stem cells, Xenopus embryonic stem cells, zebrafish embryonic stem cells.

UNIT 3 CULTURE**12**

Trophoblast stem cells – Identification and lineage specificity, isolation and maintenance of neural precursors, primitive hematopoietic cells. GF and serum free culture of stem cells, feeder free culture, genetic manipulation of human embryonic stem cells, gene silencing, RNAi, vector modified transformation on lentivirus. Recombination, homologous recombination.

UNIT 4 PROPERTIES**12**

Surface antigen markers, lineage markers, microarray, and chemical mutagenesis. Hitchhiker effect, gene silencing, epigenetic mechanism, nuclear transfer cloning, parthenogenetic stem cells.

UNIT 5 APPLICATIONS

12

Pluripotency of neural and cloned mouse embryo, genomic reprogramming, immunogenicity of stem cells, tolerance in transplantation. Therapeutic application- neurodegenerative disorders, spinal cord injury, heart diseases, diabetes, tissue engineering.

Total: 60 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Know about various stem cells, their characteristics and their niches
- CO 2:** Understand the importance of growth factors
- CO 3:** Understand the basis of media composition for growth of stem cells
- CO 4:** Discern the molecular concepts of stem cell self-renewal and tissue and organ development.
- CO 5:** Demonstrate the routine methods used in stem cell biology.

24SSKP11**SOFT SKILL 1**

L	T	P	O	C
2	0	0	1	2

COURSE OBJECTIVE:

- To enable participants Business Communication Skills
- To enhance participants E-mail writing skills
- To impart Leadership and Team Bonding skills

Credit Hours**UNIT- I READING COMPREHENSION AND VOCABULARY****06**

Filling the blanks – Cloze Exercise – Vocabulary building – Reading and answering Questions.

UNIT- II LISTENING AND ANSWERING QUESTIONS**06**

Listening and writing – Listening and sequencing sentences – Filling in the blanks Listening and answering questions.

UNIT- III GROUP DISCUSSIONS**06**

Why GD part of a selection process – Structure of a GD – strategies in GD- Team Work – Body Language

UNIT- IV CONVERSATION.**06**

Face to face Conversation and Telephone conversation

UNIT- V SELF- INTRODUCTION AND ROLE PLAY**06****Total: 30 Hours****COURSE OUTCOMES:****At the end of this course the students will be able to,**

At the end of this course the students will be able to,

- CO 1** Prioritize power of understanding and aids assimilation of vocables. Vocabulary to charge communication with educated words
- CO 2** Develop comprehensive knowledge through listening leading to answering questions
- CO 3** Build observation power and infuse self-confidence through group discussions
- CO 4** Identify methodology for befitting constructional ability
- CO 5** Experiments with inward looking and visualization of the ‘otherness’ of situations

SEMESTER II

L	T	P	O	C
4	0	0	2	4

COURSE OBJECTIVE:

This course aims to provide a basic understanding of fundamental knowledge on enzymes and their importance in biological reactions and Mechanism of action of enzymes. This course also provides the understanding the enzyme kinetics and role of coenzymes/co-factors and an overview of industrial application of enzymes.

UNIT-I INTRODUCTION**12**

Enzymes- Introduction, Nomenclature and classification of enzymes. Isolation and purification of enzymes. Enzyme units - Katal, IU. Measurement of enzyme activity. Active site - determination of active site. Amino acids - chemical probe, affinity label, and site directed mutagenesis. Investigation of 3-D structure of active site. Abzymes and Isoenzymes.

UNIT-II ENZYME KINETICS**12**

Kinetics of single substrate enzyme - catalysed reactions - Michaelis – Menten equation, importance of V_{max} , K_m , M_M equation, and turnover number. Lineweaver - Burk plot, Eadie - Hofstee plot, Hanes - Woolf plot. Kinetics of Allosteric enzymes - MWC and KNF models. Hill' equation coefficient. Kinetics of multi – substrate enzyme - catalysed reactions - Ping-pong bi-bi, random order and compulsory order mechanism.

UNIT-III ENZYME CATALYSIS AND INHIBITION**12**

Mechanism of enzyme action - general acid-base catalysis, covalent catalysis, role of metal ion in enzyme catalysis, mechanism of serine proteases - chymotrypsin, lysozyme, carboxy peptidase A and ribonuclease. Reversible Inhibition- competitive, non-competitive, uncompetitive, allosteric inhibition, feedback inhibition and Irreversible inhibition.

UNIT – IV COENZYMES**12**

Coenzymes - prosthetic group and cofactors with examples. Structure, functions and mode of action of TPP (oxidative decarboxylation), FMN, FAD, NAD, NADP (redox reactions), PALP and PAMP – (transamination), Coenzyme A (Acylation/acetylation reactions), biotin – (carboxylation), tetrahydro folate (one carbon transfer). Coenzymic functions of vitamin C, lipoic acid and coenzyme Q in metabolic reactions.

UNIT- V INDUSTRIAL AND CLINICAL USES OF ENZYMES

12

Industrial uses of enzymes - sources of industrial enzymes, thermophilic enzymes, amylases, glucose isomerases, cellulose degrading enzymes, lipases, proteolytic enzymes in meat and leather industry, detergents and cheese production. Immobilization of enzymes, methods and their applications. A brief account of non-protein enzymes - Ribozymes and DNA enzymes. Use of isoenzymes in diagnosis – LDH and CK. To Visit an industry associated with enzyme production.

Total: 60 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Describe different classes of enzymes and their functions
- CO 2:** Demonstrate basics of enzyme catalyzed reactions and their mechanisms
- CO 3:** Develop the specificity of enzymes and the chemistry involved in enzyme action
- CO 4:** Elaborate the enzyme kinetics, various factors regulating catalysis, different models for analyzing the enzyme kinetics.
- CO 5:** Summarize the fundamental knowledge on enzymes, kinetics and their importance in biological reactions.

Text Books:

1. David Nelson and Michael Cox (2005), Lehninger Principles of Biochemistry, 4th edition.
2. Trevor Palmer (2001), Enzymes: Biochemistry, Biotechnology and Clinical Chemistry, Horwood Chemical Science Series, Horwood Publishers.

L	T	P	O	C
4	0	0	2	4

COURSE OBJECTIVE:

The paper intends to provide a basic understanding of the biochemical reactions of molecules, role of enzymes as key elements that govern the biochemical transformations, break-down and synthesis of various biomolecules and the turnover of carbohydrates, proteins, lipids and nucleic acids. To study the concepts of regulation of metabolic pathways. To elaborate the relation between biochemical defects and metabolic disorders

UNIT-I CARBOHYDRATE METABOLISM**12**

Fate of dietary carbohydrates. Glycolysis and Gluconeogenesis pathway and significance with energetic & regulation, Cori cycle, Metabolism of Glycogen, TCA cycle - Energetics and its regulation. Pentose phosphate pathway. Uronic acid pathway. Gloxylate cycle. Malate/glycerol phosphate shuttle. Importance of Rate limiting enzymes. Futile cycles in carbohydrate metabolism. Interrelationship of metabolic pathways

UNIT-II LIPID METABOLISM**12**

Fate of dietary carbohydrates. Oxidation of fatty acids - Beta oxidation, alpha oxidation and omega oxidation. Metabolism of Ketone bodies - Formation, Utilization, Excretion and significance. Metabolism of Triglyceride, Phospholipids, sphingolipids and cholesterol. Biosynthesis of saturated and unsaturated fatty acids. Importance of Rate limiting enzymes.

UNIT-III PROTEIN METABOLISM**12**

Introduction, fate of dietary proteins, catabolism of amino acids - transamination, oxidative and non-oxidative deamination, decarboxylation- urea cycle and its regulation.

UNIT - IV NUCLEIC ACID METABOLISM**12**

Introduction, fate of dietary nucleic acids, catabolism of purine and biosynthesis of purine nucleotides- denovo synthesis and salvage pathways. Regulation of purine biosynthesis. Catabolism of pyrimidines and biosynthesis of pyrimidine nucleotides - denovo synthesis and salvage pathways. Regulation of pyrimidine synthesis.

UNIT- V BIOLOGICAL OXIDATION**12**

Introduction - Laws of thermodynamics, free energy, free energy of hydrolysis of ATP and other organophosphates. Role of High energy compounds - Electron transport chain- Components and reactions of ETC. Role of ETC - Oxidative Phosphorylation - Chemiosmotic hypothesis. P/O ratio,

ATP/ADP exchange, uncouplers of oxidative phosphorylation. Role of uncouplers in regulation of obesity.

Total: 60 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Understand the organization of signaling pathways that regulates the metabolism.
- CO 2:** Understand the organization of signaling pathways that regulates the metabolism.
- CO 3:** Explain the integration of biomolecules that takes place in human system.
- CO 4:** Apply the knowledge of intermediary metabolism in clinical biochemistry
- CO 5:** Identify how changes in normal metabolism lead to disease

Text Books:

1. David Nelson and Michael Cox (2005), Lehninger Principles of Biochemistry, 4th edition.
2. JL Jain, Sanjay Jain and Nitin Jain (2005), Fundamentals of Biochemistry, 6th edition.

Reference Books:

1. Lubert Stryer, Jeremy M Berg and John L Tymoczko (2005), Biochemistry, 5th edition.
2. Murray, R.K., Granner, D. K., Mayes and P.A., Rodwell, V.W (2012), Harper's Biochemistry, 29th edition, Lange Medical Books/McGraw Hill.

L	T	P	O	C
4	0	0	2	4

COURSE OBJECTIVE:

The course aims to provide an advanced understanding of the biochemical mechanisms and pathophysiological processes responsible for common biochemical disorders. The course provides an overview of normal and abnormal metabolic functions, the impact of disorders on metabolic processes, mechanisms of causation of diseases of liver, kidney and pancreas. Students will get acquainted with the role of enzymes in diagnosis of various diseases.

UNIT- I SPECIMEN COLLECTION 12

Scope of clinical biochemistry. Concepts of accuracy, precision, sensitivity and reproducibility. Quality control and determination of normal range. Specimens–Collection and processing of Blood, Urine, Feces, Throat swab, Amniotic fluid and CSF. Role of preservatives in blood and urine analysis. Anticoagulants and their specific function. Transport of biological samples. To visit a hospital or Diagnostic center to have hands on training for sample collection.

UNIT 2 CLINICAL ENZYMOLOGY 12

Principles of diagnostic enzymology - Factors affecting enzyme levels in blood. Principle, assay, and clinical significance of transaminases, creatine kinase, lactate Dehydrogenase, phosphatases, 5'nuclotidase, gamma –glutamyl transferase, amylase, lipase, trypsin, chymotrypsin, glucose -6-phosphate dehydrogenase and ceruloplasmin.

UNIT 3 METABOLIC DISORDERS 12

Carbohydrate metabolism: Diabetes mellitus – classification, metabolic abnormalities, diagnosis and management. Glycogen storage diseases, galactosemia and fructosuria. Lipid metabolism: Lipo proteins – Hyper lipoproteinemia and Hypolipoproteinemia. Lipid storage Diseases, Atherosclerosis and risk factors. Disorders of amino acid metabolism– amino aciduria, Phenylketonuria, Hartnup disease, alkaptonuria, albinism, cystinuria and maple syrup urine disease. Disorders of nucleic acid metabolism: Hyperuricemia, Hypouricemia, xanthinuria and gout.

UNIT4 ORGAN FUNCTION TESTS 12

Liver function test – Based on Detoxification and excretory function. Fatty liver and gall

stones. Bilirubin metabolism Differentiation of three types of jaundice. Renal function test: Urine analysis, Clearance test- urea, creatinine and inulin. PAH test, proteinuria and hematuria. Gastric function tests: Collection of gastric contents, Tests of gastric function – Examination of gastric residuum, Fractional Test Meal (FTM), Stimulation tests and Tubeless gastric analysis. Clinical significance of SGOT, SGPT, ALP, ACP, CPK and LDH.

UNIT 5 DIAGNOSTIC TOOLS AND IMAGING TECHNIQUES

12

Diagnostic tools: Principles and applications. Clinical chemistry analyser- semi and fully automated. Electrolyte analyser. Blood gas analyser– ECG. Glucometer - HbA1C analyser and other point care devices. Medical imaging techniques – CT, MRI, PET and SPECT.

Total: 60 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Elaborate on the role of health and its affliction by various diseases/disorders.
- CO 2:** Elaborate the Basic concepts and principles of Clinical Biochemistry.
- CO 3:** Recall the metabolism of carbohydrates, lipids and proteins.
- CO 4:** Apply the knowledge of intermediary metabolism in clinical biochemistry
- CO 5:** Create awareness of different lifestyle diseases increasingly found in present day.

Text Books:

1. M.N. Chatterjee & Ranashinde (2006), Text Book of Medical Biochemistry, 6th edition, Jaypee Publisher.
2. Burtis et al., (1999), Teitz Textbook of Clinical Biochemistry, 3rd edition, William Heinmann Medical Books Ltd.

Reference Books:

L	T	P	O	C
0	0	4	1	2

COURSE OBJECTIVE:

The course introduces students to various practical aspects of enzymology and stimulates the student's interest in learning the structure, function and kinetics of enzyme and their correlation in disease conditions. This course also makes the students to learn determination pH optimum, K_m and V_{max} of enzymes and to analyze enzyme kinetics and the effect of factors on enzyme activity.

LIST OF EXPERIMENTS

1. Determination of Optimum pH of Salivary Amylase.
2. Determination of specific activity of Salivary Amylase
3. Determination of Optimum pH of Acid Phosphatase
4. Determination of Optimum temperature of Acid Phosphatase.
5. Determination of specific activity of Acid Phosphatase.
6. Determination of enzyme activity of Creatine kinase.
7. Determination of enzyme activity of Lactate Dehydrogenase
8. Isolation of β -Amylase from Sweet Potato
9. Assay of Urease from Horse – gram
10. Determination of enzyme activity of Adenosine Tri Phosphatase
11. Determination of enzyme activity of Serum Glutamate Oxaloacetate Transaminase
12. Determination of enzyme activity of Serum Glutamate Pyruvate Transaminase

Total: 30 Hours**Course Outcome:**

At the end of this course students will be able to,

- CO 1:** Isolate different enzymes from biological sources and learn the optimal of enzyme activity.
- CO 2:** Determine the Optimum pH and temperature of Acid Phosphatase. Assay the specific activity of Acid Phosphatase.

- CO 3:** Determine the Optimum pH and specific activity of Alkaline Phosphatase. Determine the Optimum pH of Salivary Amylase. Assay the specific activity of Salivary Amylase.
- CO 4:** Analyze and Estimate the enzyme activity of Creatine kinase. Assay the enzyme activity of Lactate Dehydrogenase
- CO 5:** Analyze and Estimate the enzyme activity of Adenosine Tri Phosphatase. Assay the enzyme activity of Serum Glutamate Oxaloacetate Transaminase. Determine the enzyme activity of Serum Glutamate Pyruvate Transaminase.

2. <https://www.youtube.com/watch?v=7IMILVsE4os>

L	T	P	O	C
0	0	4	1	2

COURSE OBJECTIVE:

The course introduces students to apply various techniques for the analysis of body fluids, cells and tissues and interpretation of the results in relation to health and disease. This course also develop the students to analyze the biochemical parameters in urine and blood samples and indicate their clinical significance. The discipline encompasses fundamental and applied research into the biochemical and physiological processes of human life and application of the resulting knowledge and understanding to the diagnosis, treatment and prevention of disease.

LIST OF EXPERIMENTS**Analysis of Biological Samples**

1. Hematological analysis-RBC, WBC-TC/DC, Hemoglobin content and ESR
2. Analysis of normal and abnormal urine constituents
3. Estimation of Calcium

Enzyme assays

4. Assay of Enzymic antioxidants-SOD, Catalase and GPx
5. Assay of Creatine kinase, LDH and Na K ATPase
6. Assay of SGOT/ SGPT

Biochemical Studies

7. Estimation of renal indices-Urea, Uric acid and Creatinine.
8. Estimation of Blood Glucose
9. Estimation of Serum Bilirubin
10. Estimation of A:G ratio in serum
11. Estimation of serum Cholesterol.
12. Estimation of Vitamins-A & E

Total: 30 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Understand the different biological samples and their collection procedures. Perform biochemical laboratory analysis in blood samples
- CO 2:** Analyze biochemical in urine samples. Distinguish serum, plasma and whole blood emphasizing the role of anticoagulants
- CO 3:** Assess presence and absence of normal and abnormal constituents in urine by performing qualitative urine analysis.
- CO 4:** Analyze glucose, urea protein, total protein and A/G ratio in blood
- CO 5:** Determine analytes such as creatinine, uric acid, cholesterol and triglycerides in serum. Evaluate and interpret the generated results after analysis in order to determine the likely diagnosis

L	T	P	O	C
4	0	0	2	4

COURSE OBJECTIVE:

This paper provides insights into the primary metabolic pathways occurring in plants, the types of plant metabolites and the industrial potential of those metabolites and the role of hormones in plant growth.

UNIT 1 PHOTOSYNTHESIS**12**

Photosynthetic apparatus, pigments of photosynthesis, Calvin cycle (C3 plants), Hatch slack (C4 plants) & CAM pathways of carbon reduction and its regulation, Structure, function and regulation of RUBISCO, Crassulacean acid metabolism in plants. Photorespiration: Photorespiration pathway and significance, cyanide resistance, relationship between photosynthesis, photorespiration.

UNIT 2 PHYTOHORMONES**12**

Biosynthesis, transport, physiological effects, mode of action and signal transduction of auxins, gibberellic acid, abscisic acid, ethylene and cytokinin in germination, embryogenesis, growth and development of plant. Biochemistry of seed development and germination, Biochemistry of fruit ripening.

UNIT 3 SECONDARY PLANT METABOLITES**12**

Biochemistry and significance of secondary metabolites – cyanogenic glycosides, glucosinolates, phenolic compounds, steroids, terpenoids, and alkaloids. Biochemistry of plant toxins, phytohemagglutinins, lathy Rogens, nitriles, protease inhibitors, protein toxins, role of secondary metabolites in chemical defence.

UNIT 4 PLANT STRESS PHYSIOLOGY**12**

Plant stress, plant responses to abiotic and biotic stresses, salinity, water, heat, chilling, anaerobiosis, heavy metals, radiations and their impact on plant growth and metabolism. Interaction between biotic and abiotic stresses; stress adaptation. Mechanisms of resistance to biotic stress and abiotic stress, antioxidative defense mechanism

UNIT 5 PLANT DEFENSE**12**

Genetic basis of plant-pathogen interactions, antio R-Avr gene interactions and isolation of R genes, hypersensitive response (HR), systemic acquired resistance (SAR) and induced systemic resistance (ISR). Plant defense response, antimicrobial molecules; genes for resistance, hypersensitive

response, and cell death; systemic and acquired resistance.

Total: 60 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Develop a basic understanding of biochemical events associated with structural arrangement of plant cell and organization
- CO 2:** Explain and understand the biochemistry of photosynthetic process and its relation to man and its environment.
- CO 3:** Understand the mechanism of Nitrogen fixation and its importance in Agricultural production and economics.
- CO 4:** Know the significance of plant growth regulators in the development of plants.
- CO 5:** Acquire knowledge about the importance of secondary metabolites and its industrial applications. Growth regulators and secondary metabolites and its potential in crop development

Text Books:

L	T	P	O	C
4	0	0	2	4

COURSE OBJECTIVE:

This curriculum is designed to provide students a broad understanding of the molecular, genetic, cell biological, and Pathobiological aspects of cancer. Students will also learn about the current state of clinical diagnosis, treatment of human cancers, and hurdles to overcome to realize its potential.

UNIT 1 CELL CYCLE**12**

Regulation of Cell cycle - Cell cycle control and pRb tumor suppressor. Apoptosis and p53 tumor suppressor. Mutations that cause changes in signal molecules - effects on receptor - signal switches. Tumor suppressor genes. Modulation of cell cycle in cancer. Different forms of cancers. Diet and cancer.

UNIT 2 CARCINOGENESIS**12**

Chemical Carcinogenesis, Metabolism of Carcinogens is, Natural History of Carcinogenesis, Targets of Chemical Carcinogenesis, Principles of Physical Carcinogenesis, X-Ray radiation – Mechanism of radiation Carcinogenesis. DNA repair mechanisms.

UNIT 3 ONCOGENES**12**

Oncogenes, Identification of Oncogenes, Retroviruses and Oncogenes, detection of Oncogenes Oncogenes / Proto Oncogenes activity RAS, NFkB, Wnt signaling in cancer. Epigenetics of cancer – DNA methylation, Histone modification, gene silencing by micro RNA.

UNIT 4 METASTASIS**12**

Clinical significances of invasion, Metastatic cascade three step theory of invasion, Proteinases and tumour cell invasion. Multi-step tumorigenesis and the evolution of cancer. Tumor-promoting stimuli. Cancer stem cells.

UNIT 5 TREATMENT**12**

Different forms of therapy - Chemotherapy, Radiation Therapy, Immunotherapy. Detection of Cancers. Prediction of aggressiveness of Cancer. Advances in Cancer detection

Total: 60 Hours

Course Outcome:

At the end of this course students will be able to,

- CO 1:** Explain the different types of cancer and the treatment strategies involved
- CO 2:** Explain the mechanism of replication in cancer' and genes involved in it
- CO 3:** Describe the cell cycle as well as apoptosis processes
